Lesson Extra Practice:
Solving Equations Using Addition or Subtraction

6.2

Tell whether the given value is a solution of the equation.

1. $x + 16 = 20; x = 4$

2. $p - 4 = 28; p = 32$

3. $4w = 44; w = 10$

4. $\frac{y}{6} = 6; y = 24$

Solve the equation.

5. $x - 5 = 9$

6. $y - 12 = 0$

7. $q + 8 = 25$

8. $8 + s = 10$

9. $r - 3.2 = 1.7$

10. $8.9 = v + 7.3$

11. $\frac{1}{3} + n = \frac{2}{3}$

12. $\frac{2}{3} = \frac{1}{4} + g$

Your friend solves the equation. Is your friend correct? Explain your reasoning.

13.

$$\begin{array}{rr} 13 + m = & 56 \\ \underline{+13} & \underline{+13} \\ m = & 69 \end{array}$$

14.

$$\begin{array}{rr} 27 = n - & 15 \\ \underline{+15} & \underline{+15} \\ 42 = n & \end{array}$$

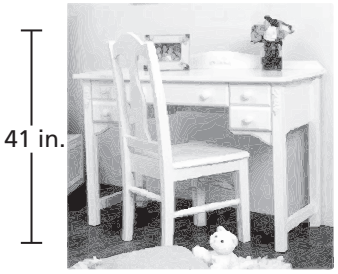
15. The height of the desk is 11 inches shorter than the height of the chair. Write and solve an equation to find the height of the desk.



---

16. The Green Sea Turtle has an average length of 42 inches. It is 32 inches longer than the average length of the Northern Mockingbird. Write and solve an equation to find the average length of the Northern Mockingbird.

---

17. The advertised price of a cell phone is $149 after a $50 mail-in rebate. Write and solve an equation to find the price of the cell phone before the rebate is applied.

---

18. You are baking cookies for a bake sale. Today you baked 24 cookies and your friend dropped off 36 cookies for you to bring. You bring 108 cookies to the bake sale. Write and solve an equation to find the number of cookies you baked on other days.

---

19. You buy a shirt that is $5 off its original price. You also buy a pair of sneakers for $43. The total cost of the shirt and the sneakers is $66. Write and solve an equation to find the original cost of the shirt.

---

20. Belmont, Forkland, and Maplesville are three small towns in Alabama. Forkland has a population of 606 people, and Maplesville has a population of 705 people. The sum of the population of all three towns is 1,813 people. Solve $1{,}813 = b + (606 + 705)$. Interpret the solution.
